

ARIES POWER

UPS Online

In today's scenario, the utility power available has, unfortunately, several unwanted parameters like sags, surges, voltage variation, frequency variation, brownouts, spikes, dips, blackouts, etc.

However, with more and more sensitive and demanding equipment being deployed by the day, the need for clean power has become all the more essential in order to ensure its correct functioning and to afford total protection.

ARIES On-Line Ups Systems offer clean power and total protection to your costly equipment.

These state-of-the-art Double Conversion type UPS Systems employing High Frequency PWM Technique using MOSFET/IGBT as the Main Switching Device for inverters are technically superior UPS system giving Pure Sine Wave Output.

Compact and well engineered, ARIES On-Line UPS have been tried and tested in virtually all applications, and have been found to be extremely reliable and consistent in delivering optimum performance. These systems, besides being easy to install and operate, are simple to maintain, should the need ever arise.

This range of UPS Systems is brought to you by ARIES. Promoted by technocrats having wide experience in the field, ARIES today is an established company with country-wide sales and service network and a product range that commands an enviable record of high MTBF and low MTTR.

SALIENT FEATURES

- True On-Line Double Conversion type UPS System
- VHD Logic employed for the first time in India.
- High Frequency PWM Design Using IGBT/MOSFET
- Instantaneous sine wave reference technique for superior over all performance
- Compact and well engineered architecture
- Wide input voltage tolerance range suitable for all types and capacities of batteries
- Pure sine wave output
- Smooth and silent operation
- Complete annunciation on the front panel
- Excellent dynamic response for step load change
- Short circuit/overload protected
- Fast correction rate for line and load regulation
- High inrush/peak current handling capacity
- Easy to install, use and maintain
- Superior performance to price analysis
